CertiCold PHARMA

THE COLD CHAIN PERFORMANCE LABEL FOR HEALTH

CertiCold is a quality label issued by Cemafroid on the basis of specifications compiled by manufacturers, users, and experts of the industrial products concerned.

The certified characteristics go beyond the regulatory thresholds.

We certify:

. Mechanically Refrigerated Equipment
. Refrigerated Equipment
. Insulated Packaging
. Refrigerated Packaging
. Environmental Chambers
. Small containers

Choose the CertiCold Pharma label: a guarantee of quality and performance for refrigeration equipment in the Health sector

With **CertiCold**, you can be sure to obtain:

- Equipment the performance of which has been objectively **validated and complies with the applicable regulation and standards** (GDP, OMS, ATP, FD X 15140, NF S 99700, CE marking, CEN, Afnor or DIN, etc.).
- **Equipment featuring state-of-the-art technologies:** manufacturers who hold the mark incorporate the latest technical advances and are pioneers of cold chain control.
- **Equipment designed to meet the expected features:** respect for hygiene during transport of health products, mechanical strength and durability, energy control and limitation of environmental impact, maintenance of applicable temperatures, proper transport conditions guaranteed between manufacturer, laboratory, wholesaler and client, etc.
- **Consistent quality of the equipment**: with the quality management system established by your provider and periodically controlled by Cemafroid, and the annual tests performed on its products, you are guaranteed to buy equipment of identical quality.
- **A fair price**: when buying equipment bearing the **CertiCold** mark you know exactly what their characteristic are, and you can compare prices objectively.

CertiCold PHARMA

THE COLD CHAIN PERFORMANCE LABEL FOR HEALTH

Certified Products	Certified Characteristics
Transport Equipment	Uniform and stable temperatures
	Appropriate refrigeration capacity
	Heavy insulation of the full equipment
	Periodical control of insulating materials
	Leak testing (DIN 1815)
	Efficiency testing of finished equipment
	Cleanability of body surfaces
	Mechanical strength of bodies
	Energy use according to standard use profile
	Performance adapted to user needs
	Limitation of noise pollution
Transport Containers	Insulation /temperatures maintained on a specified time basis and in consideration of seasonal variations
	Cleanability of containers
	Containers mechanical strength, stability, wheel resistance
	Ageing performance of materials
Transport Packaging	Insulation /temperatures maintained on a specified time basis and in consideration of seasonal variation
	Mechanical strength and moisture resistance
	Recyclability of materials
	Prescribed use and efficiency of closures
